European Technical Assessment

ETA-20/0940
of 14.12.2020

English version prepared by ZAG

General Part

**Technical Assessment Body issuing the
European Technical Assessment:**

ZAG Ljubljana

**Trade name of the construction
product**

FIX II HDG

**Product family to which the construction
product belongs**

**33: Torque controlled expansion anchor
made of galvanised steel of sizes
M6, M8, M10, M12, M16 and M20 for
use in non-cracked concrete**

Manufacturer

**SPIT SAS
150 avenue de Lyon
26501 Bourg-Les-Valence, France**

Manufacturing plant

Plant 1

**This European Technical Assessment
contains**

9 pages including 7 Annexes which form an
integral part of this assessment

**This European Technical Assessment is
issued in accordance with Regulation (EU) No
305/2011, on the basis of**

EAD 330232-00-0601,
edition October 2016

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific parts

1. Technical description of the product

The FIX II HDG in the range of M6, M8, M10, M12, M16 and M20 is an anchor made of galvanised steel, which is placed into a drilled hole and anchored by torque-controlled expansion.

For the installed anchor see Figure given in Annex A1.

2. Specification of the intended use(s) in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Chapter 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the manufacturer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

The basic work requirements for mechanical resistance and stability are listed in Annexes C1 and C2.

3.2 Safety in case of fire (BWR 2)

No performance determined.

3.3 General aspects relating to fitness for use

Durability and serviceability are only ensured if specifications of intended use according to Annex B1 are kept.

4. Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the decision 96/582/EC of the European Commission¹ the system of assessment and verification of constancy of performance (see Annex V to regulation (EU) No 305/2011) 1 apply.

5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at ZAG Ljubljana.

Issued in Ljubljana on 14. 12. 2020

Franc Capuder, M.Sc.

Head of Service of TAB

¹ Official Journal of the European Communities L 254 of 8.10.1996
ETA-20/0940, issued on 14. 12. 2020 – page 2 of 9

1. Anchor bolt (body)
2. Washer
3. Nut
4. Expansion sleeve

Marking: "FM" = identification of an anchor
 "R" = identification letter short length of anchor only for reduced embedment depth
 or "L" = long thread
 or "S" = short thread
 "d_{nom}" = nominal diameter of anchor
 "t_{fix}" = max thickness of fixture
 e.g.: **FM L 10/20** (anchor size M10x90 - t_{fix} = 20 mm)

Table A1: Materials

Part	Component	Material	Coating
1	Anchor body (bolt)	Cold formed or machined steel according to EN ISO 898/1	Galvanised $\geq 10 \mu\text{m}$ "high resistance grey opaque"
2	Washer	Steel according to DIN 125/1 – 140 HV	
3	Hexagonal nut	Steel grade 8 according to DIN 934	
4	Expansion sleeve	Stainless steel AISI 316 according to EN 10088/2	

FIX II HDG

Product description
Materials

Annex A3

Specifications of intended use

Anchorage subjected to:

- Static, quasi static load.

Base materials:

- Non-cracked concrete.
- Reinforced and unreinforced normal weight concrete of strength class C20/25 at minimum and C50/60 at maximum according to EN 206-1:2013+A1:2016.

Use conditions (Environmental conditions):

- The anchor may be used in concrete subject to dry internal conditions

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Anchorages under static and quasi-static actions are designed in accordance with EOTA TR 055, Edition December 2016 or EN 1992-4:2018.
- Verifiable calculation notes and drawings are prepared taking into account of the load to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site.
- Use of the anchor only as supplied by the manufacturer without exchanging the components of an anchor.
- Anchor installation in accordance with the manufacturer's specifications and drawings using the appropriate tools.
- Thickness of the fixture corresponding to the range of required thickness values for the type of anchor.
- Checks before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply for.
- Check of concrete being well compacted, e.g. without significant voids.
- Cleaning of the hole of drilling dust.
- Anchor installation ensuring the specified embedment depth.
- Keeping of the edge distance and spacing to the specified values without minus tolerances.
- Positioning of the drill holes without damaging the reinforcement.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not to the anchor in the direction of load application.
- Application of the torque moment given in Annex B2 or C1 using a calibrated torque wrench.
